Pharmacy Management

Pharmacy Management project is developed using PHP (CodeIgniter Framework), CSS, Bootstrap, and JavaScript. Talking about the project, it has all the essential features. This project contains only the admin side where he/she can CRUD and manage point of sales, medicine, expenses and maintaining records or details of Sales, Staff and Clients. The Admin plays the main role in the management of the system. In this project, all the main functions are performed from the Admin side.

About System

Admin has full control of the system, all the functions are to be performed from Admin panel. Here, the user can use the features of CRUD and manage point of sales, medicine, expenses and maintaining records or details of Sales, Staff and Clients. Login sessions can also be viewed from the admin panel. Now talking about all the main functions of the system, that is the feature to add, edit, delete and view clients, staff, medicine, and management of sales. While adding a client or staff, the user has to provide full name, select gender, date of birth, attach photos, registration number, , date of joining, and Email.

Likewise, while adding Clients, the Staff should provide name, select gender, age, phone number, email id, and staff number. Not just admin, here the staff has to add medicine and client details too. It's too easy to add medicine and client/staff details. he/she just has to provide a name and sales.
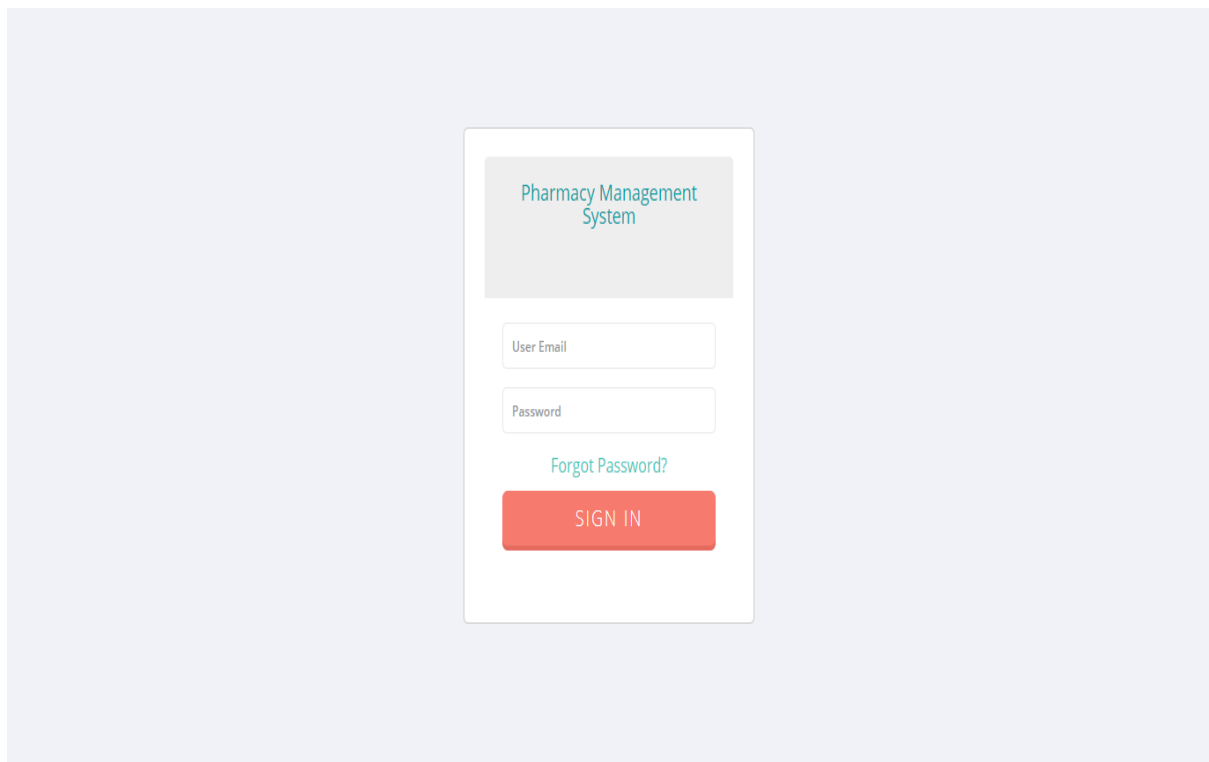

You can go through the Pharmacy Provided link:
